

Audio Quality Evaluation

Thank you so much for helping me evaluate my audio generation models! Your feedback will serve as the "human ground truth" to check how well my AI predictions match real human perception.

Quick Instructions

1. Use headphones if you can—it helps catch subtle noise or glitches.
2. Click the Google Drive link provided in each question to listen to the audio clip.
3. Rate the audio quality on a scale of **1 to 5** based on the rubric below.
4. **Flexibility:** You do NOT have to do all languages! Choose a language, rate the 6 clips, and at the bottom, you can choose to grab another language or submit and exit.

Quality Scoring Rubric (1 - 5)

Please use these standard guidelines when picking your scores:

- **5 — Excellent:** Completely natural, clear speech. Zero noticeable robotic artifacts or background noise.
- **4 — Good:** Very good quality. Minor imperfections are there if you listen closely, but they aren't annoying or distracting.
- **3 — Fair:** Audible issues. You can clearly hear some robotic tones, minor distortions, or static, and it is slightly annoying.
- **2 — Poor:** Bad quality. Heavy distortion or robotic processing makes it quite annoying to listen to, though you can still understand the words.
- **1 — Bad:** Terrible quality. Extremely robotic, heavily distorted, or completely masked by noise. Nearly impossible to understand.

Note: Please base your scores strictly on the audio quality and naturalness, not whether you like the sentence itself.

* Indicates required question

1. Which language section would you like to rate? (You can choose another one later or submit when done!)

Mark only one oval.

- ☐ English *Skip to question 2*
- ☐ Hindi *Skip to question 9*
- ☐ Kannada *Skip to question 16*
- ☐ Telugu *Skip to question 23*
